

how does the skill creation skill work? → created a wsv

i also want to work on salad and make a prettier firmware for de
GPIO signals, controllable remotely over REST so we can it
on salad, but let me dig into remarkvee and the debugging

the JS stuff can be dealt with as modules with export as
well. lol all this started by wanting to search my remarkable to

→ i can make a little webpage for remarkvee as well
to quickly search, and do other things, like quickly add
todos or expose webapi to do all kinds of stuff with
having to implement, say upload, markdown.

again also with js support.

↳ how does a package manager and bundler
work with gojs?

↳ CHATGPT research launched

✓ yeah, common. no import/export, transpile to
commonJS

DSL + JS gojs support in a remarkable: ~ $\frac{1}{4}$ context window
in cursor (so i guess a fair bit of compaction)

□ integrate the diary telling in docmgr

→ there is an unlock with a generic eventviewer/feedback
mechanism and maybe along with events we can send a
code along as well, so that pz-confir or the visualiser or
docmgr has handlers that can use a docmgr api or
pz-confir library.

||—————||

i kinda broke my brain, huh.

→ generalised as "write the code"
"write the app to run code that does X."
